Introduction	1
1. The NEMO Project	3
1.1 Neutrino astrophysics	3
1.2 Underwater/ice neutrino detectors	5
1.2.1 Light propagation in sea water and optical background	6
1.2.2 Observable sky	6
1.2.3 Ongoing projects	7
1.3 The NEMO km ³ apparatus	8
1.3.1 Layout under study	8
1.3.2 Undersea net cabling	10
1.3.3 The tower	10
1.3.4 Optical modules	12
1.3.5 Architecture of data acquisition	14
1.3.6 Timing calibration and positioning	15
1.3.7 Site and shore station	16
2. The “NEMO Phase 1” apparatus	22
2.1 Introduction	22
2.2 General layout	23
2.3 The cabling	24
2.4 Electrical power system	29
2.5 Data acquisition system	30
2.5.1 Front end module	30
2.5.2. Synchronous protocol for data transport	33
2.6 Calibration systems	36
2.6.1 Acoustic positioning system	36
2.6.2 Time calibration requirements	38

3. Timing Calibration System implementation	40
3.1 Offshore timing calibration system	40
3.1.1 System architecture	40
3.1.2 Optical pulser	41
3.1.3 The fibre	47
3.1.4 Optical network	49
3.2 Cable Calibration Station	52
3.2.1 The goal of the cable calibrations Station	52
3.2.2 Implementation	52
3.2.3 Measurements and performance	55
3.3 onshore clock system	56
3.3.1 Introduction	56
3.3.2 Project	57
3.3.3 Hardware implementation	61
3.3.4 Software implementation	65
4. Data Analysis and Results	69
4.1 Offshore Timing Calibration	69
4.1.1 How the system works	69
4.1.2 Timing Calibration Procedure	70
4.2 Data analysis	72
4.2.1 Raw analysis	72
4.2.2 Fine analysis	74
4.2.2.1 Selection of calibration signals	74
4.2.2.2 Offset interface	75
4.2.3 Results and discussion	78
4.2.3.1 Offset interface tool results	78
4.2.3.2 General results	83
4.4 Validity tests	
4.4.1 Fibre environment parameters tests	84
4.4.2 Onshore timing calibration	86
4.4.3 Lifetime test for light pulsers	87

	Index
5. Perspectives	89
5.1 Introduction	89
5.2 The project	89
5.3 Implementation and readiness	91
Conclusions	94

Tables index

Table 1. Sea cable features.	21
Table 2. Meaning of acronyms indicated in figure 21 .	24
Table 3. Time performance of the LED pulser measured by H6780	45
Table 4. Fibres investigated.	47
Table 5. Floors pulsed from floor pulsers.	51
Table 6. Summary of the delay introduced by fibre for all the paths.	55
Table 7. Main features of NI PXI – 7811R.	62
Table 8. Backplane signals of PXI divided from original specification.	63
Table 9. Some offset results.	83

Acronyms

AC	Alternating Current
ADC	Analog Digital Converter
ADCP	Acoustic Doppler Current Profiler
AGN	Active Galactic Nuclei
Br	Breakout
C*	C star (transmission meter)
CTD	Conductivity Temperature Pressure meter
DAC	Digital Analog Converter
DC	Direct Current
DM	Data Manager
DMA	Direct Access Memory
DRMS	Distance Root Mean Square
DSP	Digital Signal Processing
DWDM	Dense Wavelength Division Multiplexing
FCM	Floor Control Module
FCMI	FCM Interface
FE	Front End
FEB	Front End Buffers
FEM	Front End Module
FPGA	Field Programmable Gate Array
FPM	Floor Power Module
FWHM	Full Width at half Maximum
GPIB	General Purpose Interface Bus
GPS	Global Position System
GRB	Gamma Ray Burst
HC	Submarine Operable Connector
HDL	Hardware Description Language
IC	Integrated Circuit
ITU - T	International Telecommunication Union - Telecommunication Standardization Sector
JB	Junction Box
JTAG	Joint Test Action Group
LVDS	Low Voltage Digital Signal
NEMO	NEutrino Mediterranean Observatory
OM	Optical Module
PLL	Phased Locked Loop
PMT	Photo Multiplier Tube
RMS	Root Mean Square
ROV	Remotely Operate Vehicle
SMF	Single Mode Fiber
TBM	Tower Base Module
TS	Test Site
TSSC	Time Spectral Spread Codes
TT	Transit Time
TTS	Transit Time Spread
UDP	User Datagram Protocol
VI	Virtual Instrument
